

# **Display LIF information**

ONTAP 9

aherbin April 27, 2021

This PDF was generated from https://docs.netapp.com/us-en/ontap/networking/display\_lif\_information.html on May 08, 2021. Always check docs.netapp.com for the latest

## **Table of Contents**

Display LIF information	. 1
-------------------------	-----

### **Display LIF information**

You can view detailed information about a LIF to determine its configuration.

You might also want to view this information to diagnose basic LIF problems, such as checking for duplicate IP addresses or verifying whether the network port belongs to the correct subnet. storage virtual machine (SVM) administrators can view only the information about the LIFs associated with the SVM.

#### About this task

The following information is displayed:

- · IP address associated with the LIF
- · Administrative status of the LIF
- · Operational status of the LIF

The operational status of data LIFs is determined by the status of the SVM with which the data LIFs are associated. When the SVM is stopped, the operational status of the LIF changes to down. When the SVM is started again, the operational status changes to up

Node and the port on which the LIF resides

If data for a field is not available (for example, if there is no extended status information), the field value is listed as –.

### Step

Display LIF information by using the network interface show command.

You can view detailed information for each LIF by specifying the -instance parameter, or get specific information by specifying field names using the -fields parameter.

The following command displays general information about all LIFs in a cluster:

network interface show							
Home	Interface .	Admin/Oper	Network Address/Mask	Node	Current Is Port		
example	lif1	up/up	192.0.2.129/22	node-01	e0d		
false node					500		
false	cluster_mgm	t up/up	192.0.2.3/20	node-02	eOc		
node-01	clus1	מנו/מנו	192.0.2.65/18	node-01			
true	01401	αρ/ αρ	132.0.2.00, 10	11040 01	e0a		
CIUC	clus2	up/up	192.0.2.66/18	node-01	e0b		
true	mgmt1	up/up	192.0.2.1/20	node-01	e0c		
true node-02					600		
11000 02	clus1	up/up	192.0.2.67/18	node-02	e0a		
true	clus2	up/up	192.0.2.68/18	node-02			
true					e0b		
	mgmt2	up/up	192.0.2.2/20	node-02	e0d		
true vs1	14	,	100 0 0 100 /01				
6.3	d1	up/up	192.0.2.130/21	node-01	e0d		
false	d2	up/up	192.0.2.131/21	node-01	- 0 -1		
true	data 2		100 0 0 100 /00	n o d - 00	e0d		
	data3	up/up	192.0.2.132/20	node-02	e0c		
true							

### The following command shows detailed information about a single LIF:

```
network interface show -lif data1 -instance
                    Vserver Name: vs1
          Logical Interface Name: data1
                            Role: data
                   Data Protocol: nfs, cifs
                       Home Node: node-01
                       Home Port: e0c
                    Current Node: node-03
                    Current Port: e0c
              Operational Status: up
                 Extended Status: -
                         Is Home: false
                 Network Address: 192.0.2.128
                         Netmask: 255.255.192.0
             Bits in the Netmask: 18
                 IPv4 Link Local: -
                     Subnet Name: -
           Administrative Status: up
                 Failover Policy: local-only
                 Firewall Policy: data
                     Auto Revert: false
   Fully Qualified DNS Zone Name: xxx.example.com
         DNS Query Listen Enable: false
             Failover Group Name: Default
                        FCP WWPN: -
                  Address family: ipv4
                         Comment: -
                  IPspace of LIF: Default
```
